

# Road Reflectors

## Road Reflector Materials

Constructed from either durable plastic or ceramic, these road reflectors are especially important for making traffic lanes more visible at night.

## Colors

In North America, road reflectors have designated color meanings. White pavement markers indicate lane markings on the right pavement edge; yellow/orange pavement markers separate lanes of opposite-moving traffic; and blue pavement markers indicate shoulders and fire hydrants.

## Road Reflector Shapes

Our high-quality road reflectors are available in four shapes—**square, rectangle, oval and circle**—as well as in three sizes—**4-inch, 6-inch and 8-inch**. You can also choose whether you want no reflector, a one-sided reflector or a two-sided reflector.

We carry bulk pavement markers in cases of 100 for a cost-effective way to buy road reflectors, and we sell individual ceramic road reflectors.

Shop Stop-Painting.com's [pavement markings](#) for additional ways to encourage roadway safety.
