

CORNER MARKERS: THE SUPERIOR EDGE

PATENTED
US 8,883,290B2

Superior Mark's **beveled edges** allow for objects to easily roll or pull over the floor marking with less damage, or releasing from the floor.

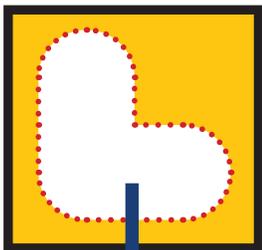

Sharp edges make it more difficult for objects to roll or pull over the floor marking. They are more prone to damage or releasing from the floor.

HOW IS YOUR EDGE?

CURVED MARKERS

**BEVELED
EDGE 0%**

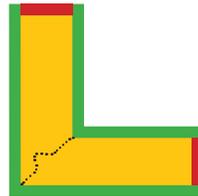

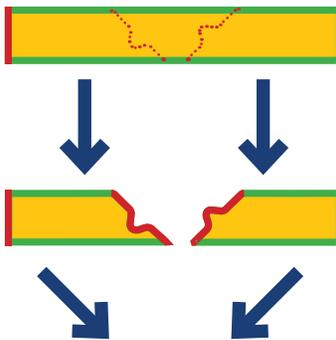

Curved corner markers are punched out of the center of marking tape, creating a **sharp edge** around the entire perimeter of the floor marker.

SUPERIOR MARK

**BEVELED
EDGE 83%**

Superior Mark corner markers use straight cuts on one end, and patent pending puzzle cuts on the other which seal together to create a completely **beveled** corner joint.

ONE-PIECE MARKERS

**BEVELED
EDGE 33%**

One-piece corner markers are punched along a single piece of marking tape, creating **sharp edges** around the majority of the perimeter.
